

The **Vistogram®** is Omnivisto's data visualisation for project managers, stakeholders and everyone involved in change. It envisions and communicates plans of **ANY SIZE** quickly and easily.

Using data you already have, the Vistogram® renders entire portfolios of change in a simple and compelling format within a web browser using Microsoft PowerBI®. The Vistogram® was conceived to push beyond the boundaries of Gantt charts. **It is one plan for everything.**

How the Vistogram® works

There is no real substitute for seeing the Vistogram® in action. Omnivisto's custom algorithms import data from existing project management data sets (Microsoft® Project, SmartSheet® etc). Omnivisto® maintain any existing hierarchy so your programmes and projects will be indistinguishable from the source data.

The Vistogram® can support very large numbers of activities running in parallel – currently PowerBI supports up to 30K rows.

Just as easily – you can have sub-projects in projects, sub-tasks within tasks as many levels deep as you like. See the Vistogram in action [here](#).

A record of historical activities

Because the Vistogram® can scale to activities of any size, it is not just a plan of what you are going to do, it is a record of everything you have ever done.

This makes the Vistogram® well suited for highly controlled environments where audit, assurance and regulatory requirements must be supported.

At Omnivisto we believe project assurance and lasting positive change start with good record keeping.

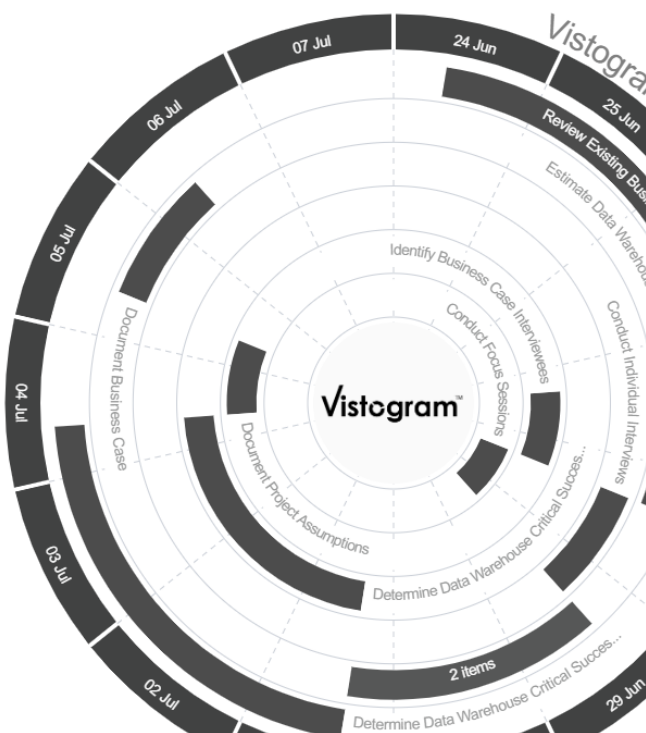

Need to know what is going on?

If you need a solution to support a multi-year global portfolio of change or just what your team is doing now, the Vistogram® can give you unrivalled clarity. Check in on a project that you are sponsoring or track a dependency for your team's delivery.

And because only the Vistogram® can **unify both plan and delivery metrics in a single view**, you can immediately see how your project is progressing.

Quick, easy and low-cost adoption is Omnivisto's mission. The Vistogram® only **uses existing data** from project management information assets you already have. Multiple data sets in multiple locations? No problem.

The Vistogram® has a small footprint and a low set-up and maintenance cost. Omnivisto's Vistogram PowerBI custom visualisation is available in the Microsoft AppSource Marketplace. Preparing your data, building and publishing your Vistogram via PowerBI can be accomplished quickly and easily.

Managing change in large enterprises

Those with experience in large scale enterprise change know just how difficult it can be to manage and communicate the plan. At the same time, you need to ensure stakeholders are kept up to date and resource brokers know what is coming down the track.

If your delivery involves multiple suppliers and business units, then plans quickly get unmanageable and expensive.

The Vistogram® utilises existing data, from multiple sources if needed, to create one intuitive plan for anything and everyone. **The Vistogram® makes large complex plans simple.**

Other workloads...

- **Life sciences** - want to see what a patient record looks like in a Vistogram®? Check out our website
- **EdTech** – the Vistogram® will bring history to life for students of all ages
- **RegTech** - need to keep a record of who did what, when and why? The Vistogram® is a great tool for recording and reviewing historical activities
- **Events & social** – are you publishing complex plans to a wide range of people? Make it easier for your audience with the Vistogram®

Vistogram® benefits

- Incredibly easy to use. No impact to existing tooling. Low barriers to adoption.
- Low cost and easy to implement
- Single view of all future change and all historical change
- Rich opportunities for branding to increase customer or employee engagement
- Work with your existing PowerBI capability – no additional software required
- Built for project managers by project managers
- Stays up to date with changes in the source data.
